

Pretalc B 65

Highly efficient dryer masterbatch for dosage into various plastics polymers during injection moulding or extrusion processes, enables processing without any pre-drying.

Pretalc B 65 is a highly efficient moisture scavenger based on a specific mineral composition and is dosed for standard at 0,5-1 % only. The maximum recommended dosage is at 3 %. By dosing Pretalc 65 you can save any predrying of raw materials.

CARRIER POLYMER	LLDPE
FILLER CONTENT	65 %
PHYSICAL PROPERTIES	density 1600 kg/m ³ Bulk density ca. 1200 kg/m ³
PACKAGING	in 25 kg bags at 1.250 kg per pallet
